/tissue_type="testis,"
/lab.host="null MGC_238"
/lab.host="null MGC_238"
/clone_lib="null MGC_238"
/clone_logan: testis, Vector: pExpress-1; Site_1: EcoRV;
Site_2: Not1; RNA obtained from testis tissue of 8 wk old animal. Tissues were snape-frozen and kept at -80c before RNA extraction and purification (Tri-reagent method). cDNA was primed using oligo-dT primer:
5-pGACTAGGTTCAGATCGCGAGCGCCCC(T) 25-3' and cloned into the EcoRV/Not1 sites of pExpress-1. Size-selection >1.4kb resulted in an average insert size of 1.9 kb. This primary library is normalized (non-normalized primary library is normalized (non-normalized primary library is NIH MGC_237) and was constructed by Express Genomics
(FrederIck, MD)"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Rattus norvegicus (Norway rat)

EST project with full-length enriched cDNA libraries carried out in Animal Genome Research Program (Japan) by National Institute of Agrobiological Sciences and STAFF-Institute
Single pass sequencing of clones derived from oligo-capped cDNA library
Vector sequences were eliminated by RepeatMasker version 2002/07/13
and crossmatch version 0.990319
Low quality bases were trimmed based on the quality values.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           354
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                482

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Description

disorders, testicular disorders, testicular cancer, pulmonary disorders, lung cancer, gastrointestinal disorders, colon cancer, stomach cancer, neural disorders, colon cancer, stomach cancer, colon cancer, stomach cancer, of the testis, brain cancer, liver cancer, or proliferative condition of the testis, lung, small intestine, brain or lymph tissue. The BGS-42 polypeptide, polynucleotide, or their modulators are also useful for treating infertility, Cushing's syndrome, emphysema, pneumonia, Addison's disease, acromegaly, Alzheimer's disease, or Parkinson's disease. The BGS-42 polypeptide can be used as a preventive agent for immunological disorders including arthritis, asthma, AIDS, sepsis, acne, Sjogren's disease to scleroderma. The antibodies may be used to purify, detect and target the BGS-42 polypeptides. The present sequence is that of a cDNA which encodes the human BGS-42 protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This invention relates to a novel testis-specific tubulin tyrosine-ligase -like polypeptide. The invention may be useful for the development of compounds with a cytostatic, respiratory

This invention relates to a novel testis-specific tubulin tyrosine-ligase—
like polypeptide, designated the BGS-42 polypeptide. The invention may
completed for the development of compounds with a cytostatic, respiratory
completed for gene the development of compounds with a cytostatic, respiratory
completed for gene the development of completed for antipacterial,
antiinflaumatory, anabolic, hypertensive, osteopathic, nootropic,
antiinflaumatory, anabolic, hypertensive, osteopathic, nootropic,
antiinflaumatory, antiseborrheic or dermatological activity acting as
tyrosine ligase modulators. In addition, the disclosed sequences may be
useful for gene therapy. The BGS-42 polypeptide or polynuclectide can be
useful for gene therapy. The BGS-42 polypeptide or polynuclectide can be
useful for gene therapy. The BGS-42 polypeptide or polynuclectide can be
useful for gene therapy. The BGS-42 polypeptide or polynuclectide can be
completed in subject, and for preventing, treating or
ameliorating a medical condition, such as a disorder related to aberrant
completed activity, aberrant cellular proliferation, reproductive
disorders, testicular disorders, testicular cancer, pulmonary disorders,
carboxypeptidase activity, aberrant cellular proliferation, reproductive
disorders, brain cancer, liver cancer, pulmonary disorders,
completed including armall intestine, brain or lymph tissue. The BGS-42
polypeptide can be used as a preventive agent for immunological
disorders including arthritis, asthma, AIDS, sepsie, acre, signers and
completed including arthritis asthma, AIDS, sepsie, acre, signers and
completed including arthritis asthma, AIDS, sepsie, acre, signers and
completed including arthritis asthma, AIDS, sepsie, acre, signers and
completed including arthritis asthma, AIDS, sepsie, acre, signers and
completed including arthritis asthma, AIDS, sepsie, acre, signers and
completed including arthritis asthma, AIDS, sepsie, acre, signers and
completed including arthritis asthma, appeared to purify of the
cubular tyroshin ligase 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1754
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1814

This invention relates to a novel testis-specific tubulin tyrosine-ligase-like polypeptide, designated the BGS-42 polypeptide. The invention may be useful for the development of compounds with a cytostatic, respiratory-Gen, gastrointestinal-Gen, neuroprotective, endocrine-Gen, antiinflammatory, anabolic, hypertensive, osteopathic, nootropic, antiparkinsonian, antiarthritic, antiasthmatic, anti-HIV, antibacterial,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     testis-specific tubulin tyrosine-ligase-like polypeptide;

immunosuppressive, antiseborrheic or dermatological activity acting as useful for gene therapy. The BGS-42 polypeptide or polymotheotide can be useful for gene therapy. The BGS-42 polypeptide or polymotheotide can be useful for gene therapy. The BGS-42 polypeptide or polymotheotide can be used for diagnosing a pathological condition in a subject, and for preventing, treating or ameliorating a medical condition, such as a disorder related to aberrant tubulin ligase activity, a disorder related to aberrant tubulin ligase activity, aberrant cellular proliferation, reproductive disorders, testicular disorders, testicular cancer, stomach cancer, lung cancer, gastrointestinal disorders, colon cancer, stomach cancer, neural disorders, brain cancer, liver cancer, or proliferative condition of the testis, lung, small intestine, brain or lymph tissue. The BGS-42 polypeptide, polymotheotide, or their modulators are also useful for treating infertility, Cushing's syndrome, emphysema, pneumonia, Addison's disease, acromegaly, Alzheimer's disease, or parkinson's disease. The BGS-42 polypeptide can be used as a preventive agent for immunological disorders including arthritis, asthma, AIDS, sepsis, acne, Sjogren's classae the BGS-42 polypeptides. The present sequence is that of a DNA traget the BGS-42 polypeptides. The present sequence is that of a DNA traget. 888888888888888888888888888888888

This invention relates to a novel testis-specific tubulin tyrosine-ligase
-like polypeptide, designated the BGS-42 polypeptide. The invention may
be useful for the development of compounds with a cytostatic, respiratory
-gen, gastrointestinal-Gen, neuroprotective, endocrine-Gen,
-den, gastrointestinal-Gen, neuroprotective, notropic,
-dentiparkinsonian, antiathritic, antiasthmatic, antihar, acting as
-tyrosine ligase modulators. In addition, the disclosed sequences may be
-cused for diagnosing a pathological condition, the disclosed sequences may be
-cused for diagnosing a pathological condition, such as a disorder related to aberrant
-cubulin ligase activity, aberrant cellular proliferation, reproductive
-cutoulin ligase activity, aberrant cellular proliferation, reproductive
-cutoulin ligase activity, aberrant cellular proliferation, reproductive
-carboxypeptidase activity, aberrant cellular proliferation, reproductive
-carboxypeptidase activity, aberrant cellular proliferation, reproductive
-carboxypeptidase activity, aberrant cellular proliferation, reproductive
-carboxypeptides, plum, small intestinal brain or proliferative. The BGS-42
-colypeptide, polynucleotide, or their modulators are also useful for
-creating infertility, cushing's syndrome, emphysema, pneumonia, Addison's
-creating infertility, cushing's syndrome, emphysema, pneumonia, Addison's
-creating infertility, cashing's syndrome, emphysema, pneumonia, Addison's
-creating infertility, astrhitis, asthma, Allos, sespis, and, sone, Sjogren's
-creating infertility, astrhity as a preventive agent for immunological
-colone sequence which is related to the invention.
                                                                                                                                                                                                                            testis-specific tubulin tyrosine-ligase-like polypeptide;

This invention relates to a novel testis-specific tubulin tyrosine-ligase—
like polypeptide, designated the BGS-42 polypeptide. The invention may
be useful for the development of compounds with a cytostatic, respiratory
CD be useful for the development of compounds with a cytostatic, respiratory
cantiparkinsonian, antiarthritic, antiasthmatic, antihacterial,
antiinflammatory, anabolic, hypertensive, osteopathic, nootropic,
antiinflammatory antiasthmatic, antiasthmatic, antihacterial,
immunosuppressive, antiseborrheic or dermatological activity acting as
tyrosine ligase modulators. In addition, the disclosed sequences may be
cc tyrosine ligase modulators. In addition, the disclosed sequences may be
useful for gene therapy. The BGS-42 polypeptide or polymolectide can be
used for diagnosing a pathological condition or a susceptibility to a
cused for diagnosing a pathological condition or a susceptibility to a
complicating a medical condition, such as a disorder related to aberrant
cubulin ligase activity, aberrant cellular proliferation, reproductive
carboxypeptidase activity, aberrant cellular proliferation, reproductive
disorders, testicular disorders, testicular cancer, pulmonary disorders,
lung canner, gastrointestinal disorders, scomeor, scomeor,
cof the testis, lung, small intestine, brain or lymph tissue. The BGS-42
cc polypeptide, polymolectide, or their modulators are also useful for
disease, acromegaly, Alzheimer's disease, or Parkinson's disease.
cc treating infertility, Cushing's syndrome, emphysema, pneumonia, Addison's
disease, acromegaly, Alzheimer's asthma, AIDS, sepsie, acromegaly, detect and
disorders including arthritis, asthma, AIDS, sepsie, acre, sjograe's
disease or scleroderma. The antibodise may be used to purify, detect and
ctarget the BGS-42 polypeptides are present sequence is that of a DNA
ccone sequence which is related to the invention.

carboxypeptidase activity, aberrant cellular proliferation, reproductive disorders, testicular disorders, testicular cancer, pulmonary disorders, lung cancer, gastrointestinal disorders, colon cancer, stonach cancer, neural disorders, brain cancer, liver cancer, or proliferative condition of the testis, lung, small intestine, brain or lymph tissue. The BGS-42 polypeptide, polymucleotide, or their modulators are also useful for treating infertility, Cushing's syndrome, emphysema, pneumonia, Addison's disease, acromegaly, Alzheimer's disease, or Parkinson's disease. The BGS-42 polypeptide can be used as a preventive agent for immunological disorders including arthritis, asthma, Allos, sepsis, acne, Sjogren's disease or scleroderma. The antibodies may be used to purify, detect and target the BGS-42 polypeptides. The present sequence is that of a partial cDNA which encodes the human BGS-42 protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  172
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  120

This invention relates to a novel testis-specific tubulin tyrosine-ligase-like polypeptide, designated the BGS-42 polypeptide. The invention may be useful for the development of compounds with a cytostatic, respiratory-Gen, gastrointestinal-Gen, neuroprotective, endocrine-Gen, antinflammatory, anabolic, hypertensive, osteopathic, nootropic, antiparkinsonian, antiarthritic, antiasthmatic, anti-HIV, antibacterial, immunosuppressive, antiseborrheic or dermatological activity acting as tyrosine ligase modulators. In addition, the disclosed sequences may be used for diagnosing a pathological condition or a susceptibility to a pathological condition in a subject, and for preventing, treating or ameliorating a medical condition, such as a disorder related to aberrant tubulin ligase activity, a disorder related to aberrant tubulin-

                                                                                                                                                                                                                                                                                                                                                                                                                                   ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to human cytoskeleton-associated polypeptides

(CYSKP) and their associated polynucleotide sequences. The sequences are useful in the treatment of disorders associated with overexpression or underexpression of CYSKP in a patient. The disorders include cell

cuderative disorders (such as cancer, actinic keratosis, arteriosclerosis, cirrhosis, hepatitis and psoriasis),

arteriosclerosis, Crohn's disorders (such as, asthma, atherosclerosis, osteoporosis, Crohn's disease, rheumatoid arthritis, diabetes mellitus

and anaemia), vesicle trafficking disorders (such as, asthma, diabetes insipidus, Grave's disease and goitre), gastrointestinal disorders, prion diseases, neurological disorders (such as epilepsy, stroke, cerebral neoplasms, Alzheimer's disease, and other motor neuron disorders), cell motility disorders, reproductive disorders (such as endometriosis and polycystic ovary syndrome), muscle disorders (such as endometriosis and polycystic ovary syndrome), muscle diseases, central nervous system disorders (such as bown syndrome and creable infarction, epilepsy and muscular dystrophy), spinal cord diseases, central nervous system disorders (such as anxiety and schizophrenia). Sequences AASS9890-AAS99823 represent cDNA molecules encoding human CYSKP of the invention

The present invention describes primer sets for synthesising 5602 full-length CDNAs defined in the specification. Where a primer set comprises:

(a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polymucleotide omprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polymucleotide which comprises a 5'-end sequence and an oligonucleotide comprises a 5'-end sequence, where the oligonucleotide comprises a 1'-end sequence, where the combination of the 5'-end sequence)3'-end sequence is selected from those defined in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               specification. The primers erg can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs asily without any specialised methods. AAH03166 to AAH13628 and AAH13631 to AAH13612 represent human amino acid sequences; AAB92446 to AAB92446 to AAB92893 represent human amino acid sequences. And AAH13629 to AAH13621 represent oligonucleotides, all of which are used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     588

Human cDNA sequence SEQ ID NO:15920

(first entry)

26-JUN-2001

AAH16735

cumour specification (or their complements, degenerate variants, sequences consisting of at least 20 contiguous residues them, sequences consisting of at least 20 contiguous residues them, sequences consisting of at least 20 contiguous residues them, sequences charby byridises to them under highly stringent conditions or sequences having at least 75 or 90% sequence identity to the 1855 sequences. Also included are detecting/determining the presence of cancer in a patient, at solated an immune response in a patient; treating kidney cancer in a patient, an isolated antibody (or its antigen-binding fragment) that expression control sequence, a host cell transformed/transfected with the vector, an isolated antibody (or its antigen-binding fragment) that specifically binds to the protein, a fusion protein comprising at least one the proteins, an isolated Treall population comprising the T-cells specific for a tumour protein, an isolated T-cell population comprising the T-cells, a composition comprising a first component (such as a carrier or immunostimulant) and a second component (such as a carrier or composition comprising at least one of the oligonucleotides, or at least one of the oligonucleotides, or at least one of the oligonucleotide, or a least one of the oligonucleotide, or at least one of the oligonucleotide, or at least one of the oligonucleotide, or at least one of the printing and/or expanding T-cells specific for a tumour protein, and stimulating and/or expanding T-cells specific for a tumour protein, and stimulating and/or expanding T-cells specific for a tumour protein, and stimulating indumer response in a patient. The present component is sequence at so this patent did not form part of the printed sequence data for this patent did not form part of the printed sequence data for this patent did not form part of the printed sequence of the detection them. The invention relates to a new isolated polynucleotide (a Human kidney tumour specific cDNA) comprising any one of the 1855 sequences identified seqdata.uspto.gov/sequence.html?DocID=20030109434. invention relates to a new isolated 85939999999999999999999999999

The invention relates to human tumour-associated antigenic target (TAT) polypeptides, and their related nucleic acids. The TAT polypeptides are coverexpressed in cancer tissues compared to normal tissues, and may thus serve as effective targets for the diagnosis and treatment of cancer in mammals. The invention also relates to nucleic acid and polypeptide and polypeptide and teate 80% identical to the TAT nucleic acids and polypeptides expression vectors and host cealls comprising a TAT nucleic acid; an antibody specific for a TAT polypeptide; a peptide or organic molecule which binds to a TAT polypeptide; fusion proteins comprising a TAT polypeptide; and methods and compositions for the treatment or antibodies, antagonists, binding molecules and compositions are useful antibodies, antagonists, binding molecules and compositions are useful for diagnosing or treating a cell proliferative disorder associated with increased TAT expression, particularly cancers such as breast cancer, colorectal cancer, lung cancer, cancers such as breast cancer, colorectal cancer, lung cancer, carvical cancer, cancers of the central cancer, melanoma and leukaemia. TAT nucleic acids may further be used as hybridisation probes, in chromosome and gene mapping, in chromosome identification and in gene therapy. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        GTCCAGGGCTGTGAGGACATCCTGCAGCTGCAGGCCGTGGTACCCCAGATAGACATG 1074

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to human nucleic acids (AAIS7798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polymuclectides are useful in gene therapy. A composition containing a polypeptide or polymuclectide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous solutions of the peripheral nervous system diseases, such as latheriner's, Parkinson's disease, Huntington's disease, such as altheriner's, Parkinson's disease, Huntington's disease, such as altheriner's and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemoreactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and C.N.S disorders.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Martinstied, GERMANY
Clone from S. Wiemann, Molecular Genome Analysis, German Cancer
Research Center (DKFZ); Email s.wiemann@dkfz-heidelberg.de;
Bequenced by AGOWA (Berlin/Germany) within the CDNA sequencing
consortium of the German Genome Project.
This clone (DKFZp434B103) is available at the RZDD in Berlin.
Please contact the RZDD: Reseourcenzentrum, Heubnerweg 6, 14059
Berlin-Charlottenburg, GERMANY; Email: clone@rzpd.de Further
information about the clone and the sequencing project is available
at http://www.mips.biochem.mpg.de/proj/cDNA/.
